BaltCOP

The catchment approach and catchment officer work in Sweden

Mats Johansson
Programme Manager
INTERREG BaltCOP

BaltCOP in a nutshell

- **Project title:**
Baltic Catchment Officer Project
- **Projektid:** 36 månader
(Juni 2024 – Maj 2027)
- **Total Budget:** €2,330 000
(extern finansiering: 80%)
- INTERREG Central Baltic

Project partners

WWF Sweden

Pasaules Dabas Fond

Estonian Fund for Nature

Latvia University of Life Sciences and Technologies

Nyköping's Rivers Conservation Association

Objective

BaltCOP aims to create a ripple effect of positive change for **nutrient reduction and restoration of ecosystems**, leading to a healthier Baltic Sea.

This will be done by developing, testing and scaling the **catchment officer approach**.

Based on cooperation between partners in Estonia, Latvia and Sweden.

Work packages

WP 1

Awareness Raising & Engagement

Increase awareness among stakeholders through workshops, field visits, and policy events.

WP 2

Knowledge Sharing & Capacity Building

Organize cross-border workshops and field visits.

Develop and share a Catchment Officer Toolkit with mapping and planning tools.

WP 3

Joint Pilot Actions

Implement pilot projects in Estonia, Latvia, and Sweden to demonstrate the catchment approach.

Monitor and evaluate the effectiveness of water retention measures.

How catchment-scale restoration could be the key to a healthier Baltic Sea

Creating a ripple effect of positive change through the **BaltCOP** project

interreg  Co-funded by the European Union
Central Baltic Programme

This is where the innovative **catchment approach** comes into play.

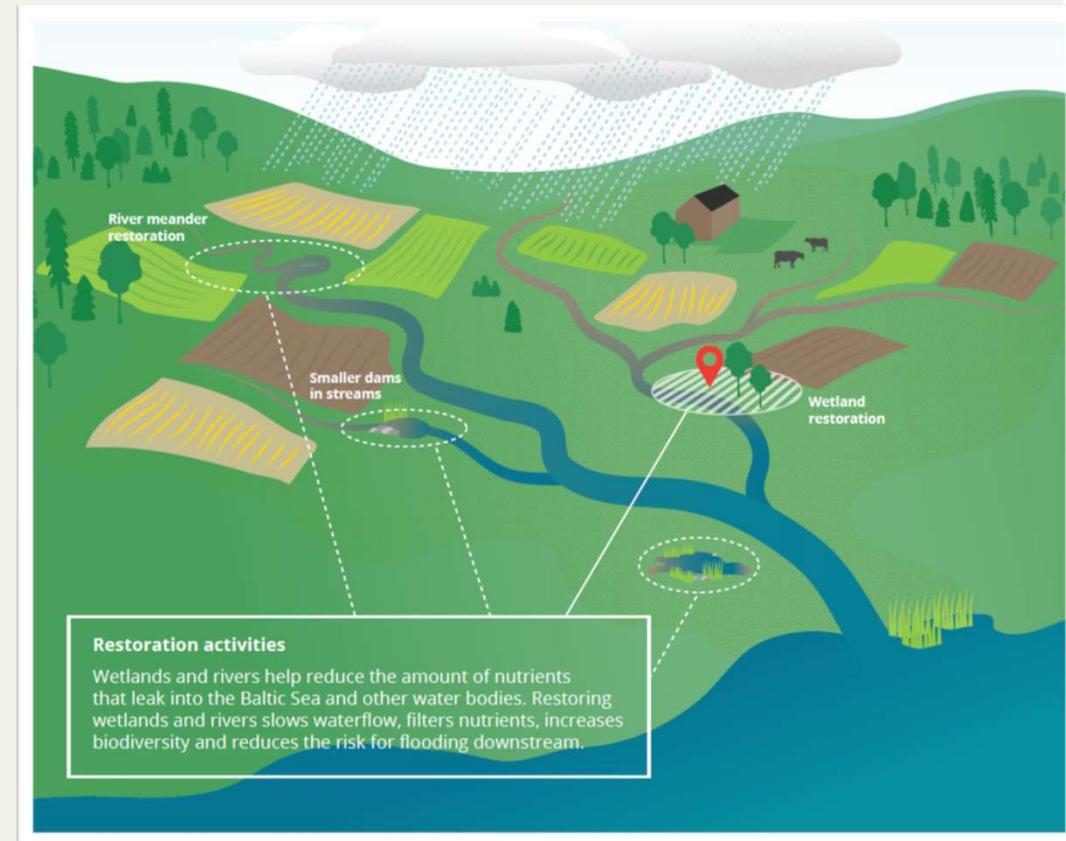

- Coordinating efforts across a catchment – also called a watershed or drainage basin – addresses problems **across the entire river system** instead of just isolated parts.
- **Catchment officers** - people who coordinate restoration efforts across a catchment - can help **bridge stakeholders, identify suitable locations** and ensure **plans translate into effective solutions**.

The catchment approach

Starting point for the WFD, the RBMPs and restoration measures

- Base for monitoring, targets and reporting
- Collaborative and inclusive approach
- Uses local knowledge to improve restoration results
- Increases overall cost effectiveness

-> *In Sweden the catchment officer approach (CO) has been developed and tested to scale measures for better water quality*

What is a catchment officer?

Catchment officers assist in **coordinating** restoration efforts across a catchment area, acting as a **bridge** between stakeholders.

They do this by:

- Identifying where measures can and should be implemented.
- Giving advice to farmers and landowners, helping them from idea to realization.
- Guiding and helping with external funding.
- Not acting as or representing the authorities.

Local catchment officer

- Step by step approach

1

Landowner discussions

Talking to the landowner or farmer.

2

Identifying a location

Checking for possible locations for restoration with the landowner.

Step by step approach

3

Analysing the area

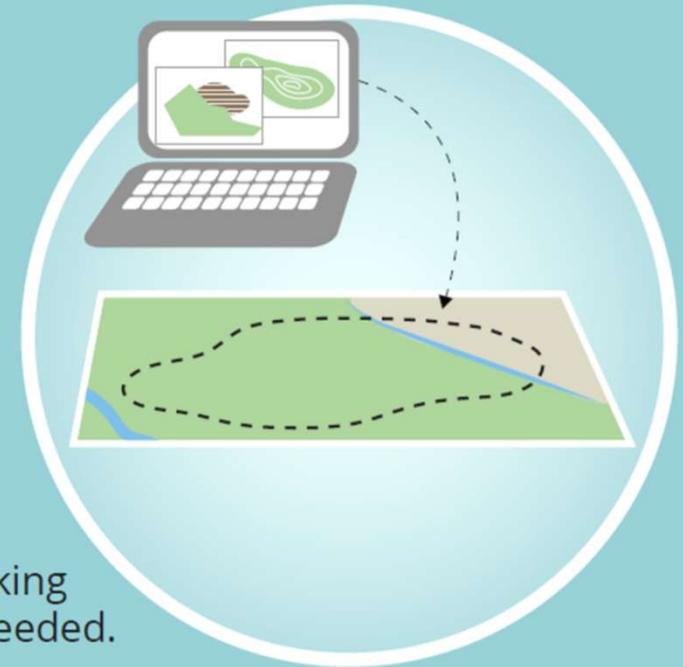

Mapping the area digitally and analysing the data.

4

Mapping the restoration measure

Designing the wetland and making adjustments if needed.

Step by step approach

5

Obtaining permits

Applying for necessary permits from local or regional authorities.

6

Preparing for restoration

Preparing for digging by clearing trees and bushes, and putting markers in the ground.

Step by step approach

7

Executing the planned restoration

Digging the wetland with the help of an excavator.

8

Restored wetland

The wetland is finished, but needs to be regularly maintained.

Catchment officer work in Sweden - 1

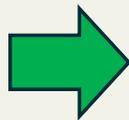

- Inspired by earlier national programs in UK and Denmark...
- National pilot project 2019 -2021, 20 catchment officers, coordinated by national agency
- Today appr 50 catchment officers, diverse organizational base and funding
- The work is mainly funded by national measures funded by wetland funding schemes, CAP and other sources

Catchment officer work in Sweden - 2

- Swedish government praises catchment officer approach in national policy documents
 - *Still, no specific funding decided...*
- WWF, Swedish Farmers Association and other actors advocate for long term funding
 - *10 years commitment - for national Catchment Officer-programmes including long term funding for measures*

**Catchment officers
+ Long term funding**

Catchment officer work in Sweden - 3

Three ways of organizing “CO-work” in Sweden

- Local Catchment Officer
 - *advisor, designer and even implementer of measures in a specific catchment area*
- Catchment “project leader”
 - *Project manager working with several COs and actors in one or more sub-catchments*
- Coordinator for a river basin or national region
 - *Coordinator for a river basin or several catchments - strategy, planning and financing both Cos and measures*

Report: State of the art - Catchment officers in Sweden

- Objective to describe experiences, challenges and needs, and to identify improvement proposals for future organization, financing and support structures
- Digital questionnaire (48 answers) and 6 interviews
- Report (in Swedish) from Swedish Agricultural University, funded by WWF SE

Link to report, in Swedish:

<https://pub.epsilon.slu.se/37418/1/eriksson-n-et-al-20250616.pdf>

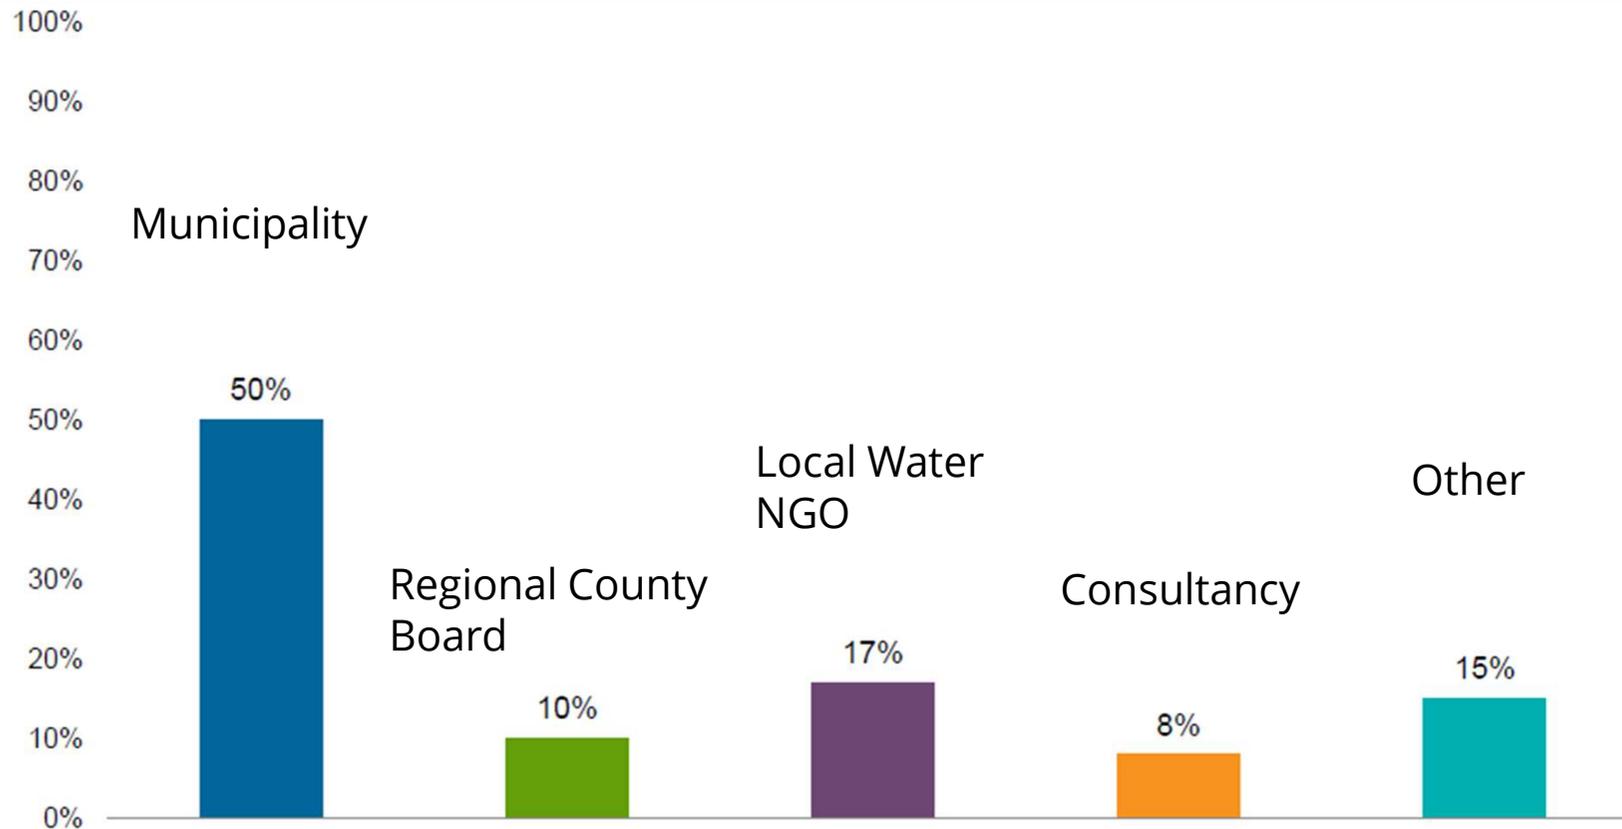

Catchment officers in Sweden – some results

- Diverse background and education
- 60% works full time as COs
- 40% are on temporary/project based employments
- 4/5 are financed by national/regional project support
- 1/3 doesn't have any plan for future funding
- Monitoring and evaluation is managed differently
- No existing national node or coordination

The CO-concept is widely spread but not yet adopted and scaled

Where do the Catchment officers work?

Steps forward and lessons learned

- Swedish context -1

- Secure financing over time – important to have more than project based funding and employment
- Don't focus on only one problem such as eutrophication
-> Instead use a multifunctional approach on water restoration
- Simplify processes for permits and harmonize between authorities

Steps forward and lessons learned

- Swedish context - 2

- Develop and share checklists and guidance documents for new COs
- Develop the social and communicative skills among COs
- Give support to COs so funding from CAP easily can be used
- Increase dialogue and cooperation between local COs and the regional authorities

Output from BaltCOP in 2027

Roadmap
- "Policy"

- **Target group:**

Baltic regional actors, National ministries, authorities, sector organisations and other actors

Toolkit
- "BaltCOP
Guidebook"

- **Target group:**

Local and national regional actors, NGOs, existing CO-projects/pilots etc.

Project sites

Krämbol wetland,
Katrineholm.
*Planned autumn
2025*

Vreta wetland,
Sättersta. *Completed
summer 2024*

Asupi Stream
restoration.
Ongoing

Penijõgi River
restoration.
*Started 2025,
implemented
2026*

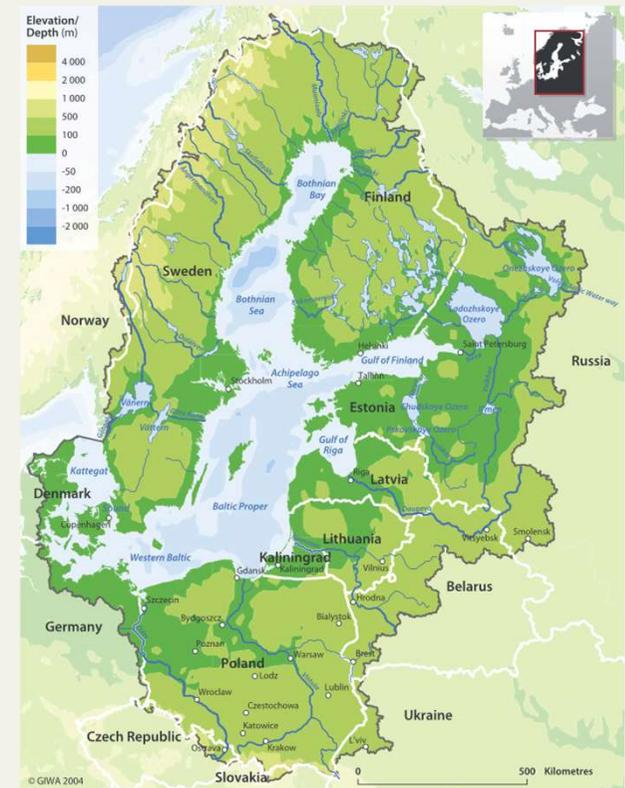

**Tuudi River and
Oidrema ditch.**
*Planned
2025/2026*

Mežacīruļi wetland
improvement.
Planned 2026

BaltCOP

- a first step for future cooperation

- **Inspire and develop** pilots/field projects in other countries/national regions
- **Policy and advocacy** on Baltic Regional level
- **Develop future Pan-Baltic project**
 - based on BaltCOP and knowledge in countries around the Baltic?
- **“Horizontal” spreading** of the CO-concept?
